

MID-CENTURY MEDIA CONSOLE

WWW.MODERNBUILDS.COM/DIY-MID-CENTURY-MEDIA-CONSOLE

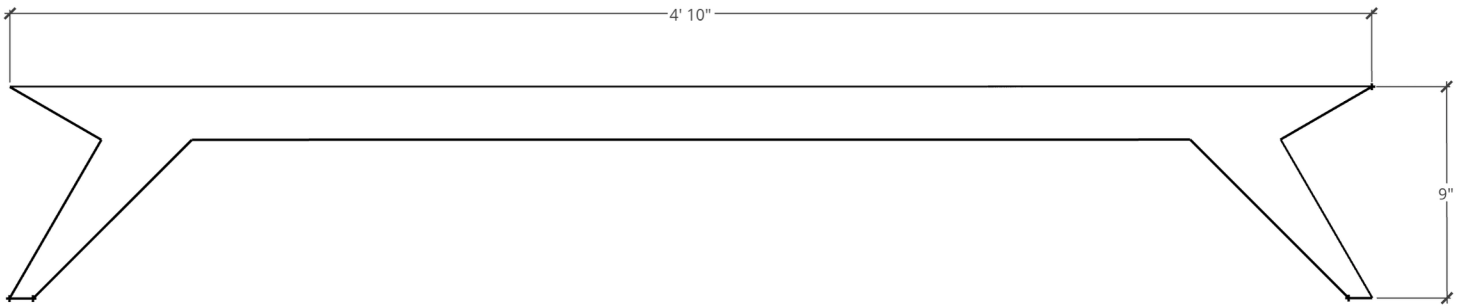

the case

The case for this cabinet is made from 3/4" plywood and uses butt joints reinforced with glues and screws. The carcass is really easy to make, it's just a box that is 70"x14.5"

The doors should be cut to fit. I had a 1/8" reveal around the perimeter of the door between the door and the case.

the base

The base for this console is all based on a few key measurements and angles. From there you just need to connect the dots. If you need a little extra info be sure and check out this section of the youtube video.
